Exam : **7130X**

Title : Avaya Aura®
Communication Applications
Integration Exam

Version : Demo

1. Before SIP Trunking configuration can begin, which state must the Avaya Session Border Controller for Enterprise (SBCE) be in?

- A. Registered
- B. Provisioned
- C. Commissioned
- D. Ready

Answer: C

Explanation:

Prerequisite Conditions for SIP Trunking

Starting point for SIP-trunking administration:

System Management > Installed tab shows SBC(s) Commissioned indicates a successful initial console configuration.

References: Avaya Aura Session Border Controller Enterprise Implementation and Maintenance (2012), page 302

2. After the initial provisioning script has been run you see your Avaya Session Border Controller for Enterprise (SBCE) displaying a Registered state in the Web GUI. You click on the install link in the EMS System Management > Devices menu to continue the installation.

After displaying a status of Provisioning for a short while, which status does the SBCE display?

- A. Commissioned
- B. Up
- C. Busyout
- D. Maintenance-Busy

Answer: A

Explanation:

SBC states:

- ▶ **Add Device** wizard run on SBC.
- ▶ Installation script must have completed successfully.
- ▶ Confirms Installation script data:
 - Appliance name
 - IP addresses
 - Subnet
 - Gateway
 - DNS
 - NTP
- ▶ **Install Device** icon available but not run.
- ▶ Intermediate stage between **Registered** and **Commissioned**.
- ▶ Transition period should be short.
- ▶ **Install Device** wizard run on an already **Registered** device.
- ▶ IP/Public IP addresses and netmask administered.
- ▶ Interfaces (A1, B1) configured.

3. From a remote worker's SIP Endpoint connected via Mobile Workspace, which tool is used to trace the successful way through Avaya Session Border Controller for Enterprise (SBCE) of an Invite message?

- A. traceRT
- B. traceSM
- C. traceMW
- D. traceSBC

Answer: B

Explanation:

traceSM is an interactive perl script that allows an administrator to capture, view, and save call processing activity on a Session Manager. While not as powerful or versatile as wireshark, traceSM is absolutely essential when it comes to working with Avaya SIP. First off, it allows you to view SIP messages even if they have been encrypted with TLS.
