Title : IBM InfoSphere Guardium Technical Mastery Test v2

Version : DEMO

1.What is CAS?

A. An agent installed on the database server that reports to the collector whenever a monitored entity, such as a file, environment variable or script output has changed.

B. An agent installed on the database server that reports to the collector whenever a monitored database's version has changed through upgrades or patch installs.

C. An optional agent installed on the collector that monitors the database server for entity changes.

D. An agent that acts as the main component of the Central Audit System.

Answer: A

2.Which of the following problems is the Application User Translation feature designed to help with?

A. The use of non-English parameter values in SQL statements issued by some applications.

B. The fact that there is no easy way for the application server to communicate with both Guardium and the data server concurrently.

C. The inability to relate a database action to a specific application user when a pool of database connections is used by an application.

D. Translating an application's requests made to a data server so these are compatible with all the database management systems that Guardium supports.

Answer: C

3.How would a DBA or developer notify Guardium using the Application User API that an application user has taken or given up control of a data server connection?

A. By importing the GuardUtils library and issuing calls through it from the application.

B. By creating a wrapper solution that sends HTTP requests to Guardium's service-oriented API whenever an event like this happens.

C. By registering the application's connection pool with Guardium.

D. By using the GuardAppUser call in the form of a SQL SELECT statement to indicate that a new application user has taken control of the connection.

Answer: D

4.Which of the following native SQL commands is required to link external data to internal data?

A. IMPORT

B. JOIN

C. ALTER

D. LINK

Answer: B

5.What is a Guardium vulnerability assessment (VA)?

A. A test that employs state-of-the-art algorithms to determine the potential risks of your network.

B. A series of predefined and custom tests that allow customers to automatically identify and address database vulnerabilities.

C. An optional service from Guardium where a security specialist visits a customer's site before a proof-of-concept engagement to determine the customer's specific requirements.

D. A piece of software distributed as a multi-platform plug-in that allows a supported database management system to constantly monitor potential threats and report on these periodically.

Answer: B
